

Your AI agent **has your wallet.**

That is the problem we are solving.

THE PROBLEM

Agents need money. You need limits.

WITHOUT THIS

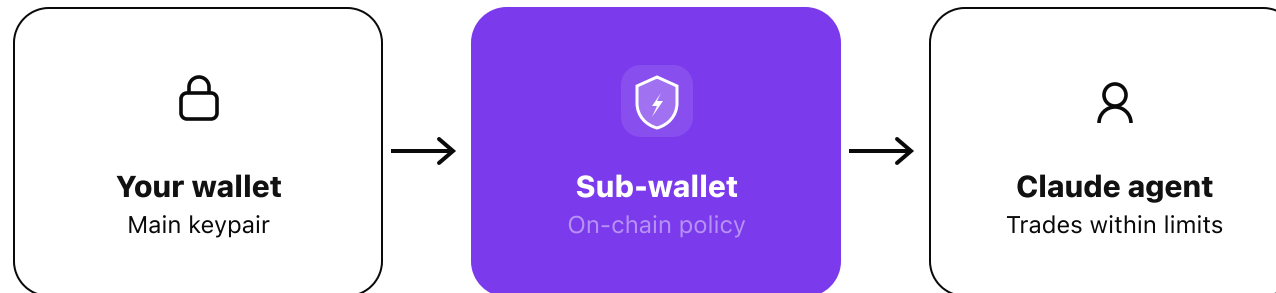

- ⚠ Full wallet access
- ⚠ No daily cap
- ⚠ Any token, any DEX
- ⚠ One bug = everything gone

WITH SMART ALLOWANCE

- ✓ Isolated sub-wallet
- ✓ Daily spend cap
- ✓ Whitelisted tokens only
- ✓ Rules enforced on-chain

THE SOLUTION

Policy on Solana. Agent cannot break it.

HOW IT WORKS

Three steps. Fully autonomous.

01

Set the rules

Pick tokens, daily limit, max trade size. Stored on Solana as a PDA.

02

Claude decides

Every 5 minutes, Claude checks prices, reads the policy, and decides to buy, sell, or hold.

03

Chain enforces

If the trade breaks the policy, Solana blocks it. Not the app. The chain.

BUILT WITH

Every layer production-grade.
